

SWITCH BOX
SBP-6-

Use

This is a switch box for distributing power source (AC100V or DC24V, etc) of various equipments such as a plug-in transducer or a box transducer.

Features

1. Can distribute power source up to six circuits, and each circuit has a built-in power source control switch and a built-in fuse with alarm contact (output turn ON against burnout of fuse).
2. Fuse is installed in U (-) side only. Burnout alarm is 1a parallel contact. If a fuse burnt out, a white flag shall be displayed in indication hole and it is the time to replace the fuse. Fuse can be replaced by pull-out and plug-in from outside. Fuse only for replacement is sold.

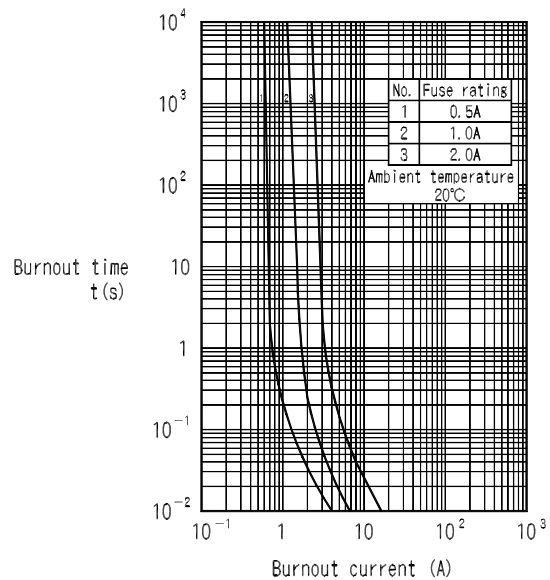

(100 × 240 × 58mm)/1kg

Performance and common specifications

Number of output circuit	6 circuits
Maximum working voltage	AC, DC132V
Wiring capacity of power source side	12A
Fuse rating	Rated current: 0.5A, 1A or 2A
Alarm output at burnout of fuse	Contact output (turns ON by fuse burnout of any circuit)
Contact capacity of alarm output	Contact capacity: AC25VA, DC25W Maximum voltage/current: 125V, 0.5A (Both AC and DC)
Withstand voltage	Between electric circuit/earth AC1, 500V, 1 min.
Operating temperature & humidity range	-10 - + 55 , 30-80%RH
Appearance color	Munsell 1.5 (black)
Mounting	Wall mounting
Weight	Approx. 1kg
Accessories	Rating plate sheet for use

Burnout characteristic

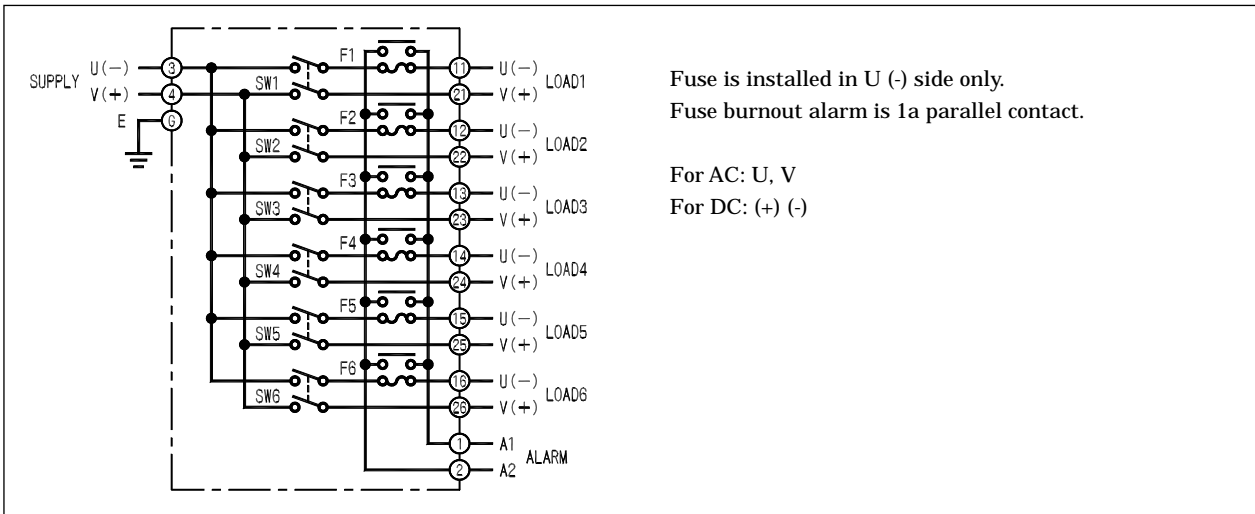

Please decide fuse capacity on examining power source coordination between power source and the instrument actually being used.

[Refer to <burnout characteristic> when selecting a fuse.]
